

# How TeleDent Delivers Connected Care

TeleDent's proven design efficiently integrates teledentistry into dental practices and programs at any scale. With telehealth features built specifically for dental care, organizations of any size can use TeleDent to deliver connected care for their patients and providers. TeleDent focuses on a streamlined user experience paired with enterprise-grade security. **Powerful. Flexible. Mobile-friendly.** Ready for your organization to deliver digital transformation.

## Consolidated Clinical Communications

Messages, images, files, video recordings, live video links, and documents such as digital treatment plans are all found in a single searchable thread.

## Clinically-Smart Virtual Consults

Easily initiate multi-party video calls within TeleDent. Share screens, change video layouts, add intraoral camera feeds, capture stills, record video...

## Industry Leading HIPAA Security

Keep patients' protected health information safe and stay HIPAA-compliant with TeleDent's end-to-end encryption.

## Dental Professional Workflows

Starting with a personalized dashboard, teams work the way they need with task, appointment and provider management tools.

## Mobile-Friendly for Everyone

Patients and providers can use all of TeleDent's capabilities across devices, wherever they have a modern browser.

## Integrations & Custom Solutions

Including Dentrix and Open Dental, with custom development solutions available.
